

CEFI, DEFI, AND TRADFI ALL IN ONE PLACE.

With centralized and decentralized finance options becoming instrumental to successful strategies, traders want to incorporate crypto ETF and crypto-related equity options data into their investments. However, accessing this data in a cleaned and normalized volatility surface format is difficult.

CRYPTO ETF AND TRADITIONAL STOCK OPTIONS DATA

Analyze crypto-focused stocks and ETFs alongside CeFi and DeFi markets on Amberdata Derivatives, the leading crypto options analytics platform. Now supporting TradFi crypto data, we fully integrate all three venues—TradFi, CeFi, and DeFi—into one seamless experience within our existing Amberdata Derivatives functionality. With the same familiar data format and clean and reliable volatility data, incorporate all crypto options markets into your strategies with ease and precision.

KEY FEATURES

COVERAGE

Supported ETF and crypto-related equities include BITX, BITO, COIN, EETH, ETHU, MARA, MSTR, MSTU, SATO, and IBIT.

DETAILS

Trade data decorated with traded IV, traded price, pre-trade BBO, and details of the aggressor.

GRANULARITY & DELIVERY

Get option chains snapshots every 5 minutes from 2024-11-11 and every 30 minutes from 2021-01-01. Access the data via API and visualize with our GUI.

CLEAN VOLATILITY DATA ACROSS ALL THREE CRYPTO MARKETS
