

# DEFI INTELLIGENCE

There are hundreds of active decentralized finance protocols, and that number is growing daily. Understanding liquidity, fees, and analytics across a protocol is crucial to digital asset strategies, but with decentralized finance activity split across major networks and diverse contract implementations, it is difficult to adequately analyze the necessary and details surrounding DeFi transactions and events.

## ALL DEFI ACTIVITY ACROSS ALL BLOCKCHAINS - ALL IN ONCE PLACE

Amberdata provides robust insights into decentralized finance markets, allowing you to compare, contrast and analyze the growth and activity of DeFi. Leverage our enterprise API and seamless analytics features to confidently build time-sensitive, production-grade systems. With significantly less friction than SQL interfaces, and fully normalized and standardized data across protocols, Amberdata's DeFi Intelligence empowers you to rapidly analyzing DeFi data across any blockchain network.

MARKET MAKERS | REGULATORS | RESEARCHERS | EXCHANGE OPERATORS | RISK MANAGERS | VENTURE CAPTIALISTS

### KEY BENEFITS

#### COVERAGE

Ethereum and major EVM-compatible L2 transaction logs

#### DELIVERY

Leverage our seamless REST API

#### GRANULARITY

Full history. Analytics and aggregations at the minutely, hourly and daily level.

### MONITOR DEFI ACTIVITY

#### DEXS

Understand trading volume and find whale holders or liquidity providers enabling markets. Analyze fees paid and earned, trading activity with candlesticks, and price movements. Manage your portfolios with profits, losses, and impermanent loss metrics.

#### LENDING PROTOCOLS

View the amount borrowed and loaned, interest rates, and interest paid and borrowed. Assess current liquidation risk, liquidation profits, user engagement, protocol growth metrics, revenues, and more.

#### STAKING

Analyze the amount staked, restaked, and yield earned. Determine potential ecosystem risk from locked-up assets.
