# amberdata

# ON-CHAIN INTELLIGENCE

Regulators need to safeguard market stability while ensuring that the cryptoeconomy operates transparently and ethically, while auditors must have deep visibility into accounts, prices, and asset gains and losses. However, with petabytes of on-chain activity split across major networks, it is difficult to deeply investigate and confidently understand the context and details surrounding blockchain transactions and events.

## CAPTURE COMPLEX ON-CHAIN INSIGHTS

Amberdata provides an easy interface to easily explore and analyze fundamental, unaggregated on-chain activity, giving you the flexibility to analyze the data in the best way for your business. Leverage an enterprise-grade API and seamless analytics to confidently and quickly build time-sensitive, production-grade systems. With significantly less friction than SQL interfaces and the most trusted data in the market, analyze blockchain data across any network.

## REGULATORS | AUDITORS | RISK MANAGEMENT

# KEY BENEFITS

### COVERAGE
Bitcoin, Ethereum, and major EVM-compatible L2s

### DELIVERY
Leverage our seamless REST API

### GRANULARITY
All transaction logs, including a complete history

# USE CASES

**TRACE FUNDS**
and their movements across the cryptoeconomy, validate holdings of assets for ETFs and other TradFi securities backed by digital assets

**EXPLORE NASCENT PROJECTS**
and get key, early insights before the project and protocol gain mainstream adoption

**ASSESS RISK FOR MAJOR ASSETS**
such as stablecoins and network native assets to understand the vulnerabilities in the cryptoeconomy posed by asset liquidity and concentration

**ANALYZE TRANSACTIONS**
and inspect active wallets, protocol interactions, token transfers and clustersof wallet interactions
